| 6 | Research Schedule     | 2 |
| 7 | References            | 2 |

# LIST OF TABLES

# **LIST OF FIGURES**

## **1 Problem Statement**

Logically, the first step in any research is to provide a clear statement of the problem. This step is indispensable in the writing process in that it governs the organization and flow of the thesis/defense. The problem statement should provide a synopsis of the purpose of the study, briefly define and delimit the specific area of the research, and foreshadow the questions to be raised. A problem may be stated in terms of a verbal statement, i.e., “The purpose of this research is to examine...” or “This study aims at ascertaining ....” Problem could also be stated in the form of a question like: “Why are Muslims divided?” or “What are the factors associated with the rise of hate crime against Muslims in the West?”

## **2 Background**

The background and history highlights empirical foundations of research. The purpose of a background/history section is to give the reader the relevant facts about the topic and/or research site so that they understand the material or case in the proposal and how it links to the questions posed.

## **3 Problem Justification**

In stating the problem, it is also necessary to specify why it is important and what new insights may be found. What would be its net contribution to the body of knowledge in the field(s), and/or towards solving the problems for humanity at large?

## **4 Literature Review**

A review of relevant literature is the third step and is of great significance. The literature review helps relate the proposed study to the larger ongoing discourse in the literature about a phenomenon, filling in gaps in the literature and extending earlier studies. The literature review is neither a chronological summary of related works nor a mere catalogue of previous studies published in the field. Literature review is a well-organized critical appreciation of related and relevant literature conceptually integrated within the logic of the proposed investigation. The student should show

whether other researchers have studied the same or similar problems before, from what perspectives have these studies been conducted, and whether these researches have been theoretically or empirically adequate.

## **5 Methodology**

A research problem should, where possible, be set within the framework of a theory. A “theory” is a collection of interrelated law-like statements or hypotheses aimed at explaining a phenomenon. Theories suggest hypotheses to be tested. A hypothesis is a conjectural, conditional (if-then) statement linking two or more variables. Hypothesis grows out of theoretical or conceptual frameworks. The theoretical or conceptual framework and the resultant hypotheses will identify and name the important variables to be studied. The student must identify the variables and define the variables or terms conceptually and operationally.

## **6 Research Schedule**

Identify the major tasks involved in your proposed study and place and identify the length of time to complete the tasks and the order in which they will be done.
